SUMMARY

AI Engineer with a BS in Artificial Intelligence, delivering production systems where correctness matters more than novelty. Work spans real-time voice agents, edge-deployed computer vision, machine learning models, and deterministic document and email automation systems. Experienced across the full delivery cycle, from dataset curation and model training to FastAPI services, CI/CD, and stakeholder-facing ownership.

TECHNICAL SKILLS

Languages: Python, C++, LaTeX, SQL, HTML/CSS

Frameworks: TensorFlow, Keras, FastAPI, OpenCV, Scikit-learn, PyTorch, SwaggerUI, Postman, Livekit, CrewAI

Development Tools: Git, Copilot, Claude Code, VS Code, Docker, Microsoft Graph, Huggingface, Jupyter notebook, Kaggle, GitHub, GitHub Actions, n8n

Interests: Model Development, Online Learning (Coursera, DeepLearning.ai), Community Service Projects, Reading Blogs/Books, Gaming, Sports, Hiking/Travelling

EXPERIENCE

AI Engineer

Dec 2025 – Present

Zencloud Technologies

On-site

- Managed and led the development of ‘Smart Call AI’, Email Triage, and BST PO automation systems.
- Contributed to other projects: Vupop, Wrangle AI by developing AI modules.
- Researched and trained ML models for classification of user prompts and cost forecasting, integration of content moderation.
- Currently working on multiple automation workflows.
- Served as the primary liaison for international stakeholders, managing end-to-end project life cycles and deliverables.
- Leveraged and powered the pipelines with different tech stacks like WebRTC (Livekit), Deepgram STT, ElevenLabs TTS, LLMs, and async Python (FastAPI) etc.

AI Intern

Sep 2025 – Nov 2025

Zencloud Technologies

On-site

- Developed and fine-tuned classification models (ML + LLMs) for tasks such as summarization, translation, and creative generation, achieving balanced performance across 8+ categories.
- Fine-tuned large language models (LLMs) with custom prompt engineering and evaluation pipelines, improving output relevance and reducing inference errors by ~20%.
- Automated AI workflows using n8n for data preprocessing, orchestration, and inference, reducing manual overhead by ~65%.
- Designed scalable training and deployment pipelines by integrating Kaggle and Hugging Face, enabling reproducible experiments and faster iteration cycles.

AI & Computer Vision Engineer Intern

Jul 2024 – Oct 2024

ClouxiPlexi

Remote

- Developed YOLOv8-based object detection models on COCO and custom datasets for image/video analysis, improving detection accuracy by ~17% overall.
- Co-developed a conversational chatbot using LLMs and prompt engineering, enhancing user interaction efficiency by ~70%.
- Built autonomous AI agents using CrewAI for multi-step task execution, reducing task completion time by ~85%.
- Utilized Docker for model containerization and deployment. Contributed to requirement analysis, documentation, and agile task management via Trello.

PROJECTS

Email Triage & Auto-Response System

Jul 2026 – Present

Python, Microsoft Graph API, Azure, Docker, GitHub Actions

- Built an email automation system for a UK property management firm that classifies inbound mail across multiple shared mailboxes via Microsoft Graph and drafts client-approved replies, with containerized builds and CI/CD through GitHub Actions.
- Selected a deterministic rules engine over an LLM to keep every classification explainable and reproducible, a hard requirement for correspondence involving arrears, legal proceedings, and vulnerable residents.
- Engineered safety gates escalating complaints, financial hardship, solicitor requests, and unverified third parties to human review instead of auto-replying, shipped draft-first behind a staged per-mailbox rollout and backed by ~840 automated tests validated against live mailbox traffic.

BST Supplies: Purchase Order Digitization (EFACS Integration)

Jul 2026 – Present

Python, PDF Parsing, XML, EFACS ERP, pytest

- Engineered a fully deterministic PDF-to-XML pipeline converting customer purchase orders into ERP-ready imports for EFACS, replacing manual re-keying with zero AI inference or cloud dependency, keeping every extracted value traceable to its position on the page and all customer data on-premise.
- Designed an evidence-scoring resolver to infer missing ERP account codes, matching each order against a 1,547-account master register and 2,068 delivery addresses to achieve ~94% automated routing with zero misroutes, holding ambiguous cases for human review rather than guessing.

Truck Driver Monitoring System (DMS)

May 2026 – Jun 2026

Python, YOLOv11, OpenCV, face_recognition, Edge AI, Jetson Orin Nano, Orange Pi 5

- Engineered a real-time computer vision pipeline utilizing YOLOv11m for localized edge inference, optimized for continuous telemetry and low-latency alert generation.
- Curated and annotated a proprietary dataset of ~20,000 samples, establishing strict class balance to achieve 92% accuracy across 4 driver states.
- Integrated a parallel facial recognition module utilizing the lightweight buffalo.l architecture, enabling driver identification without bottlenecking the primary object detection stream.

Smart Call AI

Dec 2025 – Apr 2026

Python, FastAPI, Livekit, Twilio, TTS, STT, LLM, OpenAI

- Built a Smart Call AI agent that takes customer orders for restaurants and handles live phone calls and orders through messages; routes finalized customer orders through POSHub directly into Foodhub for fulfillment.
- Eliminated API lag using a local “Shadow POS” to instantly map messy voice inputs to live menu inventory improving the response time by ~3–5s.
- Constrained LLM hallucinations using rigid tool-calling loops, smoothly orchestrating Stripe checkouts, dynamic POS logistics, and Twilio SMS alerts.

Wrangle AI

Oct 2025 – Nov 2025

Python, FastAPI, Random Forest, KNN, Logistic Regression, Prophet, Holt-Winters, XGBoost

- Developed prompt router engine and trained it for classifying user prompts into 8+ classes, with an accompanying intensity score.
- Developed cost forecasting models for automated estimation pipelines, comparing gradient-boosted (XGBoost) against time-series approaches (Prophet, Holt-Winters) to cut manual estimation effort.
- Served both modules behind FastAPI endpoints with a shared evaluation harness, enabling drop-in integration for downstream teams.

Sense Stream: Emotion-Driven Media Analysis & Speech Generation

Jun 2024 – Jul 2025

Python, Flask, TensorFlow, NLP, CNN, GRU, Seq2Seq bi-LSTM

- Designed and developed a modular video analysis system integrating four AI modules: Emotion Detection, Toxicity Detection, Summarization, and Emotionally Expressive TTS.
- Achieved a Rouge-1 Precision of 28.9% in the Summarization module, 97.13% accuracy in Emotion Analysis module, 98.49% in Toxicity Detection module.
- Built an intuitive web interface with Flask, displaying results with real-time graphs, summaries, and downloadable reports, enhancing user experience.

Human Recognition using CV & CNN

Feb 2023 – Jun 2023

Python, VS Code, OpenCV, Numpy, Jupyter

- Real-time human detection and recognition system built with OpenCV and custom CNN, enabling live training and inference via webcam, designed for on the go learning and recognition.
- Model training on the images is done in real-time before model inference.

EDUCATION

Bahria University

Bachelor of Science in Artificial Intelligence

Focus on Natural Language Processing, Computer Vision, Deep Learning & Machine Learning

Islamabad, ISB

Oct 2021 – Jun 2025

Edwardes College Peshawar

Intermediate in Pre-Engineering

Peshawar, PEW

Sep 2019 – Jul 2021

Peshawar Model School

Matriculation in Sciences

Peshawar, PEW

Mar 2017 – Jun 2019

Actively Participated in Summer Camps, Science Fairs & Acted as Chief Proctor
